

PHASE 14 — AI Feedback Loop

PS AI-driven learning mechanism bhi maangta hai.

Prototype mein actual model retraining mat karo.

Instead:

AI extraction

↓

Human correction

↓

Feedback stored

↓

Correction pattern database

↓

Future recommendation

Example:

AI:

Khasra = 127/7

Human:

Khasra = 127/2

Feedback:

handwriting pattern → "/2"

Dashboard:

AI Learning Dataset

Corrections collected: 347

Field with most corrections: Khasra

Future architecture mein model fine-tuning possible.

🔥 Ab ek aur innovative feature

“Record Health Score”

Har land record ko ek overall score:

LAND RECORD HEALTH

86 / 100

Extraction Quality 94

Data Completeness 91

Cross-record Consistency 82

Spatial Consistency 88

Freshness 76

Another record:

LAND RECORD HEALTH

41 / 100

Extraction Quality 92

Data Completeness 87

Cross-record Consistency 31

Spatial Consistency 28

Freshness 35

This gives administration a prioritization mechanism:

Pehle kaunse records manually verify karne chahiye?
