

**PHASE 6 — Yahan se tumhara real project start hota hai**

## **INTELLIGENT VALIDATION ENGINE**

**Ye prototype ka hero module hona chahiye.**

**PS explicitly business rules, cross-database verification, duplicate detection aur consistency checks maangta hai.**

---

**Validation Engine ko 5 layers do**

### **V1 — Field Validation**

**Example:**

**Khasra = 127/2**

**Valid structure?**

**✓ Valid**

**Area:**

**-2.5 acre**

**✗ Invalid area**

---

### **V2 — Cross-field validation**

**Example:**

**Khasra = 127/2**

**Village = ABC**

**Master data:**

**127/2 → Village XYZ**

**Result:**

**🚨 CONFLICT**

**Extracted:**

**Village = ABC**

**Master:**

**Village = XYZ**

---

### **V3 — Cross-record validation**

**Document:**

**Owner = Ram Singh**

**Khasra = 127/2**

**Existing database:**

**Owner = Ramesh Singh**

**Khasra = 127/2**

**Result:**

**⚠ OWNER NAME MISMATCH**

---

### **V4 — Spatial validation**

**Ye prototype ka WOW feature ban sakta hai.**

**Record:**

**Khasra = 127/2**

**Area = 2.50 acre**

**Mock GIS database:**

**Khasra 127/2**

**Mapped area = 2.48 acre**

**System:**

**✓ Spatial consistency**

**Difference = 0.02 acre**

**Lekin agar:**

**Document = 2.50 acre**

**GIS = 5.80 acre**

**then:**

**● HIGH RISK**

**Spatial Area Mismatch**

**PS itself GIS/cadastral-map integration require karta hai.**

---

**V5 — Temporal / Mutation validation**

**Example:**

**2018 → Ram Singh**

**2021 → Suresh Singh**

**2024 → Suresh Singh**

**Current document:**

**Owner = Ram Singh**

**System:**

**⚠ POSSIBLY OUTDATED RECORD**

**Latest known mutation:**

**2021**

**Current extracted owner:**

**Ram Singh**

**Expected latest owner:**

**Suresh Singh**

**Ye normal OCR se bahut alag hai.**
